DETAILED ACTION

Oath/Declaration

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

It does not identify the mailing address of each inventor. A mailing address is an address at which an inventor customarily receives his or her mail and may be either a home or business address. The mailing address should include the ZIP Code designation. The mailing address may be provided in an application data sheet or a supplemental oath or declaration. See 37 CFR 1.63(c) and 37 CFR 1.76.

It does not identify the city and either state or foreign country of residence of each inventor. The residence information may be provided on either an application data sheet or supplemental oath or declaration.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bleam et al. (6,143,016) in view of Sirhan (5,919,175) further in view of Palmaz (4,733,665). Bleam et al. disclose a flexible catheter shaft (14), a balloon (22), a tubular prosthesis (12), a pusher (28), a guide wire and a reinforce mandrel extending through a port. Sirhan discloses a guide wire tube as claimed (11, col. 4, lines 48-64, col. 6,

lines 23-36) for use to replace the guide wire (21) wherein the guide wire tube extending through an exit port of rapid exchange catheter. Palmaz discloses a balloon catheter for delivering stent and a reinforced sheath (89) to constraint the stent and the balloon in a contracted condition. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ the guide wire tube as disclosed by Sirhan into Bleam et al.'s device in order to simplify the delivery device as well as to provide for easy and rapid exchange of both the catheter or the guide wire used to guide the catheter through a body lumen. Regarding the sheath, it would have been obvious to one having ordinary skill in the art to employ a reinforce sheath as disclosed by Palmaz in the system of Bleam et al. in view of Sirhan in order to safely advance the apparatus of Bleam et al. in view of Sirhan into a blood vessel.

Regarding claim 47 and 48, the stop being the expandable member of Bleam et al. in view of Sirhan further in view of Palmaz. All the steps as claimed are adapted to carried out by the apparatus of Bleam et al. in view of Sirhan further in view of Palmaz and the apparatus of Bleam et al. in view of Sirhan further in view of Palmaz is configured to carry out the steps as claimed.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to (Jackie) Tan-Uyen T. Ho whose telephone number is 571-272-4696. The examiner can normally be reached on MULTIFLEX Mon. to Sat..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, ANHTUAN NGUYEN can be reached on 571-272-4963. The fax phone
